## MORE EFFICIENCY PER DOLLAR!

with the New B&W 100-Watt, 5-Band Turrets

Type BCL  
(Center Linked)

Type BEL  
(End Linked)

\$8.50 Net

No other band-switching method provides such high efficiency, quick band change and faultless performance in 100-watt applications as the new B&W 5-Band Turrets. Several new features, including a specially-designed switch, enable them to cover the 10 to 160 meter bands with efficiency equal to the best individual plug-in coil systems.

Types BCL and BEL Turrets may be used with tubes operating at 1,000 to 1,250 volts and a maximum input power of 165 watts. Extremely compact, they may be mounted directly on panel. You'll find the total cost of one of these turrets and suitable condensers is actually less than the cost of components for any comparative method now available. Ask your jobber to show you the BCL and BEL Turrets, or write for full details.

P.S. Don't forget other B&W Air Inductors . . . there's a size and type for EVERY amateur application. Send for the B&W Catalog—it's your guide-book to coil efficiency and economy.

Heat-resistant, constant-pressure stainless steel spring spot-welded to band

Silver contact button spot-welded to spring extends through hole in band

Thread on band — no nut required

## ...A NEW *Positive Pressure* BAND FOR ADJUSTABLE RESISTORS

No more broken or damaged resistance windings when you move the slider band on adjustable wire-wound resistors! No more oxidation or corrosion at point of contact.

No matter how much you tighten the new IRC Positive Pressure Contact Band itself, the pressure of the silver contact button on the windings remains safe, constant and positive. No matter how often the bands are readjusted, there is no danger to the windings. Moreover, the bands will not deteriorate under high operating temperatures or under constant use.

These new bands are available in 9/16", 3/4" and 1 1/8" diameters and are now supplied with all IRC Adjustable Wire-Wound Resistors from 25 to 200 watts, inclusive. Sold separately for use on your old resistors, too. Ask your jobber. Stop throwing adjustable resistors away because of broken wires and corroded contacts!

CHAMPION McELROY

McElroy says: "Practice alone will not develop your Co-Ordinative Faculty, necessary to skill and speed. You must be taught how to practice—to use your MIND—as I was taught by CANDLER. His system is the easiest way I know to learn code RIGHT and to acquire skill and speed."

CHAMPION JEAN HUDSON  
W3BAK

At age of 9 Jean won championship in Class E. At age of 14 she won championship at Asheville tournament in Class B. Jean copies 45 wpm on her "mill" easily.

# Speed Up Your Code

The New CANDLER SYSTEM Will Train You at Home to Read Code at High Speeds Like You Read Print

1940

The New BOOK of FACTS for Code Students, Amateurs and Radio Operators Will Be Sent to You Without Cost or Obligation.

Contains inside advice and tips from the champions and world's fastest Amateur and Commercial ops. They tell you how to quickly develop Skill and Speed. Contains information on License Requirements and a list of QUESTIONS, many of which will be asked you by the R. I., when you take your exam. This book is of great value to you, and it costs you nothing. A postal will bring it to you.

If you've practiced and practiced but can't get over the "hump" that seems to be your limit—don't be discouraged. Thousands of skilled operators have had the same experience. Some thought they were dumb; others thought they weren't "gifted." But you should see those fellows today! They can send beautiful code and copy fast press 4 to 8 words behind without conscious effort or strain. Those fellows have Automatic Sound Consciousness—and they got it through CANDLER Training!

## No Expensive Practice Sets Needed For Candler Training

Learning to Send and Receive Code Rapidly, skilfully is a Mental Process that requires Mind Training such as only CANDLER can give you. Practice of any kind without this Specialized Training is like trying to learn electricity without a knowledge of Ohm's Law. CANDLER shows you the easy, interesting way to Speed, Skill, and that Amateur or Commercial License in half the usual time.

McDONALD. W8CW

McDonald says: "Of course, practice is necessary, but without the proper training such as CANDLER gives, practice may lead in the wrong direction. I owe my speed to Candler Training."

WALTER H. CANDLER  
Originator of the famous Candler System and founder of the Candler System Company.

## GOODBYE to GUESSING!

### The New SPRAGUE HIGH VOLTAGE MICAS

All Sizes  
All Shapes  
All Voltages

You don't have to go looking with a microscope for voltage markings and even then run the chance of making a mistake—not with the Sprague High Voltage Mica Condensers. In designing this new line, we were amazed to find how often voltage mistakes occur. That's why,

in addition to offering the finest, most moisture-proof and durable micas, we use different colored labels for each voltage—red for 5,000 volt condensers, blue for 2,500 volt and so on. You know at a glance exactly what you're getting—and, from past experience with Sprague, you'll know their quality cannot be surpassed. Catalog free.

Specially insulated wire makes possible new small sizes with layer windings, greater dependability.

### Koolohms Will Handle the Jobs That Ordinary Resistors Won't

Look at the construction of Sprague Koolohm Resistors. See for yourself! Common sense will tell you the many advantages of having every bit of wire insulated **before it is wound** with a special heatproof, moisture-resistant material. Layer windings—larger wire—more resistance in less space—5% standard accuracy—no chance for shorted windings—cooler operation—inexpensive non-inductive windings—these are but a few of the resulting features which have made Koolohms first choice of leading industrial users for difficult jobs, and "tops" for any amateur radio requirement you can name. # The CENTRALAB Family of VOLUME CONTROLS

In every branch of the electronic industry Centralab Controls play a major part in producing certain, smooth, flawless attenuation. Set manufacturers, servicemen and experimentors turn to Centralab for positive performance. Whatever your Volume Control needs may be . . . specify Centralab.

All controls furnished with any desired maximum resistance and with appropriate tapers. Control and resistor problems melt away when you put Old Man Centralab on the job.

**STANDARD**  
Long famous for the reliability of Centralab's non-rubbing contact and long wall type resistor. Available plain, or with one, two, or three taps, and with SPST, DPST, or SPDT Underwriters Approved switches.

**MIDGET**  
Small in size, but large control efficiency due to the long straight path of the wall type resistor. Fits well in crowded chassis as solder lugs do not project far beyond the control radius of 17/32". Available single, dual, or triple, plain, or tapped, with SPST, SPDT, DPST, and a special dial lite push switch for battery sets.

## WIRE WOUND RADIOHM

Identical in size and appearance with the Standard Radiohm except has brown colored base. Resistances range from 2 ohms to 10,000 ohms. Rating 3 watts. Furnished plain or with SPST, SPDT, or DPST Underwriters Approved switches.

## SUB-MIDGET

The smallest diameter reliable control. Long wall type resistor gives low noise level. Rapid Transfer of heat from resistor to metal shell gives maximum load rating of 1 1/2 watts. No switch or taps. Available as grounded or insulated rheostat or potentiometer with solid or tubular shaft.

## TWIN AND TRIPLE CONTROLS

Two or three sections assembled in tandem for special purposes. Each section fully shielded and has independent connections. All variable controls attached to a single shaft. Twin controls also available with concentric shafts; one inside the other. Supplied with or without Underwriters Approval snap switches.

The resistor curve of a volume control is more important than its overall resistance...that is why Centralab controls are furnished with the variety of curves shown here. Curve six is most widely used for high resistance radio grid and diode controls. Curve 1, or 4, are best for C bias, and Curve 3 for antenna C bias. Curve 10 is used on tapped controls.
